Earthrise from NASA's Lunar Reconnaissance Orbiter as it circled the moon 134 km above its surface in October 2015. Earth is in full phase and both Africa and South America can be seen. But in fact, observers on the Moon would not see the Earth set or rise. Why? And why is the bottom of Earth cut off?

Science reveals our place in the Universe and the fragility of Earth. It teaches us how Earth has evolved, how humans now impact its evolution, and the dangers facing our planet. Science is essential for a civilized society, but its lessons are often ignored or even attacked, and its progress, stymied. In uncharacteristic form, scientists around the world are marching for science on Earth Day, April 22, 2017. People everywhere must wake up!

We are fortunate this evening to have a principal organizer of the march for science in Canada speaking about the march and **Science as a Way of Thinking**.

Kathleen Walsh, a Windsor native, is Interim Executive Director of Evidence for Democracy, a non-profit, non-partisan, Ottawa-based organization whose motto is *standing up for science and smart decision-making in Canada*. She holds an M.Sc. from the London School of Economics and Political Science.
